AHS-B-MD Series

BENCHTOP MEDICAL AUTOCLAVES WITH PREVACUUMS AND DRYING

CLASSIC LINE

The AHS-B-MD Series benchtop medical autoclaves with prevacuums and drying are particularly suitable for sterilizing solid loads and objects with complex geometries.

Advanced features and total versatility
for multiple applications

Solid loads are completely dry upon cycle
completion

Benchtop medical autoclaves with prevacuums and drying

The AHS-B-MD Series benchtop medical autoclaves have advanced features to meet all the sterilization needs of medical facilities to increase productivity and process all types of loads.

They are specially optimized for processing loads that require a higher steam penetration capacity to be properly sterilized such as porous solids, packaged loads, objects with cavities, items with complex geometries as well as liquids.

Thanks to their outstanding versatility in sterilizing all types of loads, the integrated independent steam generator, touchscreen display, separate clean water tank, initial prevacuum pulses, final vacuum drying, and direct water discharge, these autoclaves excel in performing everything from the simplest to the most demanding applications.

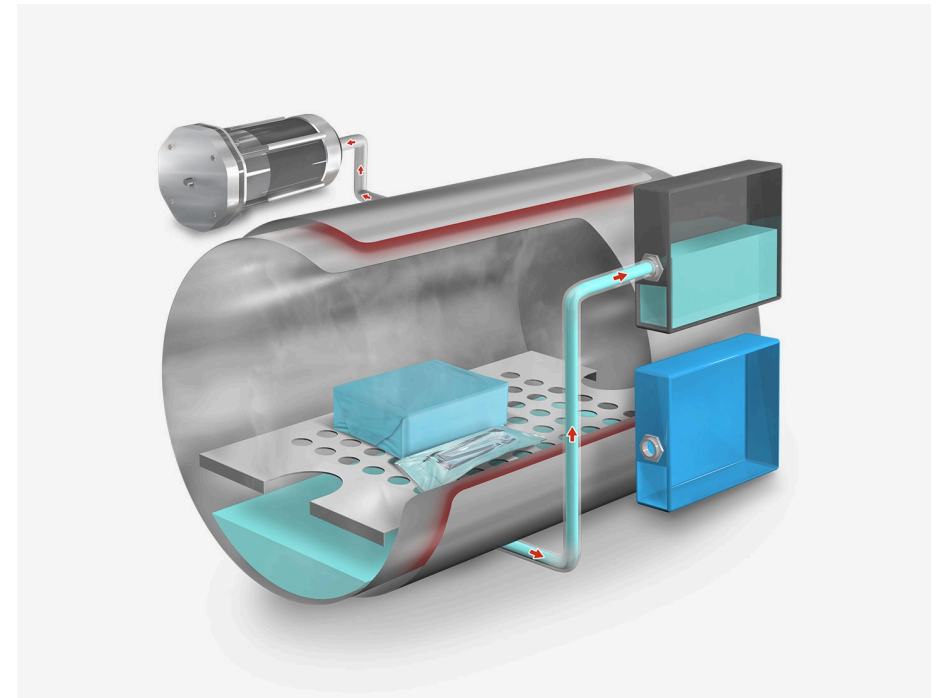

FAST STERILIZATIONS WITH DEEP STEAM PENETRATION

Achieve fast cycle times with instant steam production from the built-in steam generator. The pre-vacuum phase, featuring multiple vacuum pulses, thoroughly removes air pockets, ensuring effective sterilization of all types of loads.

THOROUGHLY DRIES THE LOAD WITH THE FINAL DRYING FUNCTION

Thanks to its final drying function using a heating jacket and vacuum pump, the load will be completely dry at the end of the cycle, ensuring safe processing of porous solids and packaged objects. There is no need to dry the load in an external oven.

ADVANCED FEATURES AND FULLY AUTOMATIC

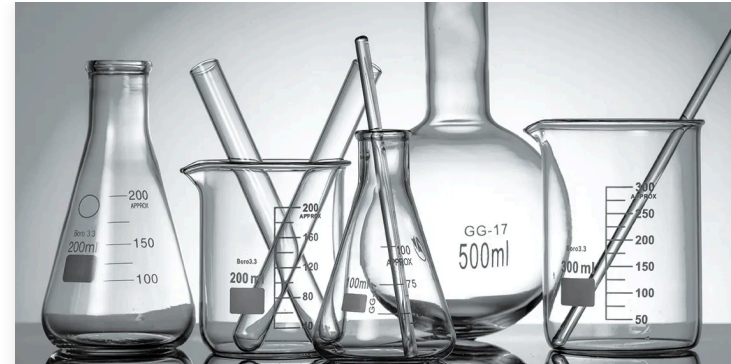

Touchscreen display with up to 50 programs, mechanical purge and integrated steam generator. Includes bacteriological filter and water tanks. Filling with purified water can be automated. Includes bacteriological filter and water tanks. Filling with purified water can be automated.

POROUS SOLIDS AND WRAPPED OBJECTS

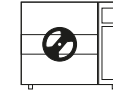

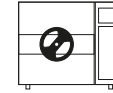

The mechanical purge of air using the vacuum pump facilitates the posterior penetration of steam, facilitating the sterilization of bagged items. Moreover, at the end of the cycle, they will be dry thanks to the drying function.

GLASSWARE

In programs for solid loads, the heating jacket and vacuum pump are activated at the end of the sterilization phase to completely dry the load.
